HUMAN PATTERN INTELLIGENCE

DEEP CAREER MAPPING

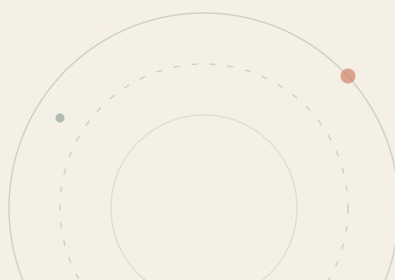

Arpita Bera

Aptitude, timing and the path with least resistance

CONSULTATION DETAILS

NATIVE

Arpita Bera

• EXECUTIVE SUMMARY

Where things stand

This report compares two independently prepared assessments:

- Psychometric Education & Career Assessment
- Astrology Education & Career Assessment

Neither assessment was modified to match the other.

The objective of this report is to identify where the two perspectives converge, where they differ and what requires further exploration.

KEY STRENGTHS

What works for you

- Business Orientation
- Analytical & Quantitative Direction
- Creativity
- Structure

KEY CHALLENGES

What needs attention

• RECOMMENDED DIRECTION

The path with least resistance

PRIMARY PATH

Commerce with Mathematics

SECONDARY SUPPORTED PATHS

PCM / Computer Science

PCM / Computer Science

• DETAILED ANALYSIS

Overall Picture

The two assessments show meaningful convergence around:

Business and commercial orientation

Structured working

Applied problem-solving

Potential for analytical/business careers

The most important difference is around creativity.

The psychometric assessment gives Artistic interest very high prominence.

The astrology assessment also recognises creativity, but does not place a purely creative career at the centre of the educational direction.

This difference is important and should be explored rather than removed.

• DETAILED ANALYSIS

Area 1: Business orientation

Psychometric finding:

Enterprising and Conventional interests are both very strong.

This suggests comfort with achievement, organisation, business environments and structured execution.

Astrology finding:

Business, management, strategy, finance and commercial decision-making are strongly supported.

Combined interpretation:

Strong Convergence

Business-oriented education and careers deserve serious consideration.

• DETAILED ANALYSIS

Area 2: Analytical and quantitative direction

Psychometric finding:

This can only be concluded once Arpita's objective aptitude results are verified.

Her Investigative interest is strong, but interest alone does not establish numerical or reasoning aptitude.

Astrology finding:

There is a strong analytical, numerical and commercial reasoning indication.

• DETAILED ANALYSIS

Combined interpretation:

Astrology indication with psychometric confirmation pending.

If objective Numerical and Reasoning aptitude are subsequently strong, this becomes one of the strongest areas of convergence in the overall assessment.

• DETAILED ANALYSIS

Area 3: Creativity

Psychometric finding:

Artistic is Arpita's strongest RIASEC interest.

This is a significant finding and should not be diluted simply because other domains are also strong.

Astrology finding:

Creativity is present and meaningful, but appears more likely to complement an analytical, commercial or technology-oriented direction than become a purely artistic profession.

Combined interpretation:

Partial convergence with an important difference in emphasis.

The counselling question becomes:

Should creativity be Arpita's primary profession, or should it become a differentiating strength within another profession?

• DETAILED ANALYSIS

Area 4: Structure

Psychometric finding:

Strong Conventional interest suggests comfort with organisation, systems and structured environments.

Astrology finding:

The education and career pattern also supports structured, applied and responsibility-oriented work.

Combined interpretation:

Strong Convergence

This reduces the likelihood that an entirely unstructured creative career will be the only suitable direction.

• DETAILED ANALYSIS

Stream Recommendation

Astrology currently places:

Commerce with Mathematics as the primary direction

PCM / Computer Science as a secondary possibility

Economics-oriented Humanities as another viable route.

The psychometric assessment should not independently confirm the final stream until objective aptitude and academic marks are available.

Therefore the current combined recommendation would be:

• DETAILED ANALYSIS

Primary area to validate:

Commerce with Mathematics

Also evaluate:

PCM / Computer Science

Economics-oriented Humanities

Design/business hybrid routes

Final stream selection should depend on objective aptitude, actual school performance and Arpita's own preference.

• DETAILED ANALYSIS

Graduation direction

The strongest combined areas to explore are:

- Finance
- Economics
- Business Analytics
- Accounting
- Management / Strategy
- FinTech
- Data / Technology-business combinations

Creative bridge opportunities

Arpita's very strong Artistic interest should not be discarded.

Instead, it creates interesting hybrid possibilities such as:

- Product Management
- FinTech Product
- Data Visualisation
- Consumer Analytics
- Brand Strategy
- UX Research
- Business Design
- Solution Design
- Digital Product

These careers can potentially combine:

Analysis + Business + Creativity

rather than forcing a choice between an analytical career and a creative career.

Areas of strong convergence

Business / commercial orientation

Structured working & Applied problem-solving

Management / strategy potential

Potential for business-related higher education

• DETAILED ANALYSIS

Areas requiring confirmation

Numerical aptitude

Logical reasoning aptitude

Actual Maths performance

Science performance

Whether she enjoys quantitative work in practice

• DETAILED ANALYSIS

Main divergence

The main difference between the two assessments is the importance assigned to creativity.

Psychometrics indicates very strong Artistic interest.

Astrology recognises creativity but gives greater emphasis to analytical-commercial education and career.

This should become a central counselling discussion rather than being resolved automatically by the report.

• DETAILED ANALYSIS

Recommended counselling questions

Would you prefer creativity to be your profession, or something you use within your profession?

• DETAILED ANALYSIS

- Do you genuinely enjoy Mathematics and quantitative problem-solving, or are you simply capable of doing them?
- Would you prefer Finance/Analytics if the work allowed creativity and problem-solving?
- Would a role such as Product, FinTech, Consumer Analytics or Strategy feel more attractive than either pure Finance or pure Design?
- Which activities have you voluntarily pursued outside formal academics?
- When choosing between an interesting subject and a subject offering greater career security, what matters more to you?

• FINAL ADVISORY

Walking away with clarity

The current combined assessment suggests that Arpita should not be viewed as either a purely analytical student or a purely creative student.

The stronger overall pattern is:

Analytical / Commercial + Structured + Creative

If objective aptitude and academic performance confirm strong numerical and reasoning capability, Commerce with Mathematics would become a particularly strong educational option, followed by Economics/ Analytics/ Finance/ Management-related pathways.

Her high creative interest should remain an important part of career selection.

Walking away with clarity (continued)

The most promising long-term direction may therefore lie not at either extreme, but in careers that allow her to combine business or analytical capability with creativity and communication.

Examples include:

- FinTech
- Product Management
- Business Analytics with visualisation/consumer orientation
- Consumer Strategy
- Brand Strategy
- UX Research
- Digital Product
- Solution Design

The final recommendation should be made after objective aptitude, academic performance and Arpita's own preference are reviewed.

THE PRACTICE

About Orbit Sage

The Practice & Philosophy

Orbit Sage is a modern guidance and decision-advisory practice founded by Lalita Aggarwal. By integrating Vedic planetary mechanics with psychometrics, behavioral science, and 25 years of corporate leadership experience, the practice identifies underlying human patterns to provide actionable clarity on education, career, business, and major life transitions.

Our Core Pillars

Pattern Intelligence

Understanding timing, cycles, and underlying personal dynamics rather than predicting passive outcomes.

Actionable Clarity

Providing structured, decision-support frameworks to move from uncertainty to confident direction.

Ethical Guidance

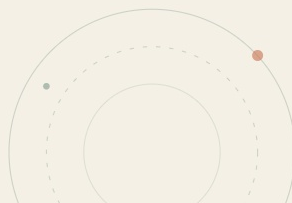

Guidance focused on self-awareness, personal agency, and practical lifestyle discipline — without fear-based or ritual-heavy approaches.

FOUNDER & CHIEF ADVISOR

Lalita Aggarwal

Twenty-five years of corporate leadership, now applied to human pattern work — translating charts, behaviour and lived context into decisions people can act on with confidence.

DISCLAIMER

This consultation is intended to offer perspective, clarity, and a deeper understanding of the patterns and possibilities indicated in your chart. Astrology is a framework for reflection and guidance rather than a guarantee of specific events, outcomes, or timelines. The insights shared are best used alongside your own judgement, lived experience and, where relevant, advice from qualified medical, financial, legal or other professionals. Ultimately, your choices and actions remain an important part of how any period unfolds.
